

HG- PODS

Model

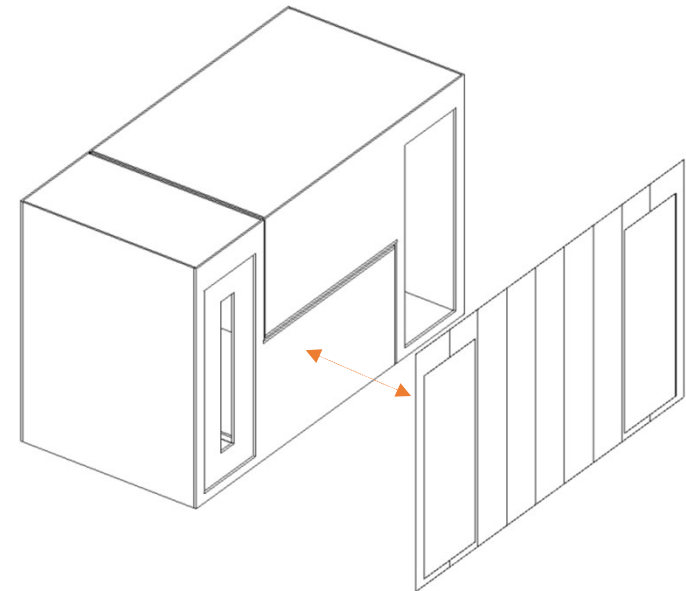

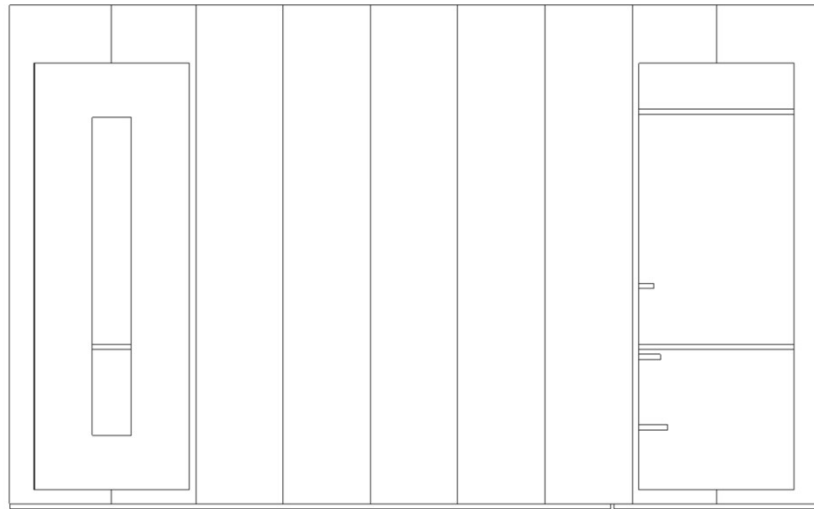

The modules are now based on a construction material of a 3-layer panel of wood ([NOVATOP SWP](#)) used in the building industry. This is a suggestion based on material thickness, stability, and load-bearing capacity. Metal sandwich materials or other suitable materials can also be used.

Exterior materials

Walls clad with rigid vinyl, a blend of PETG and biopolymer. The sheets can be mounted on site to provide a durable, low-maintenance finish and cover the seam between the two modules.

Rigid vinyl
Palladium® Rigid Sheet

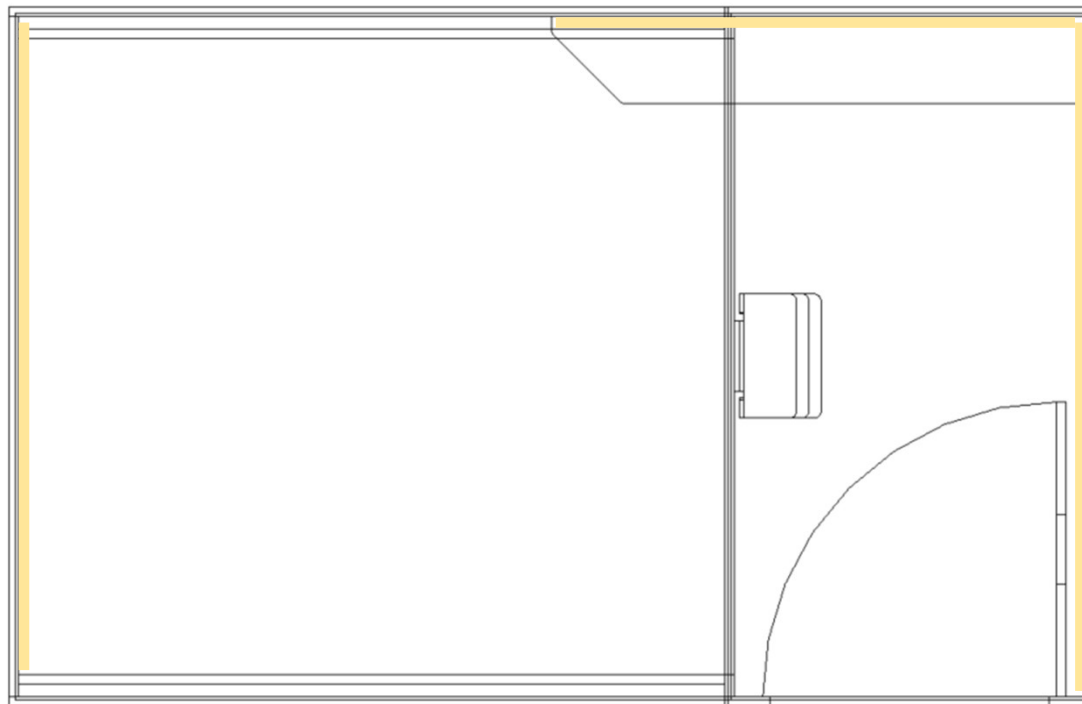

Plan view Top Module

The top module has space for a double bed mattress, 180x200 cm.

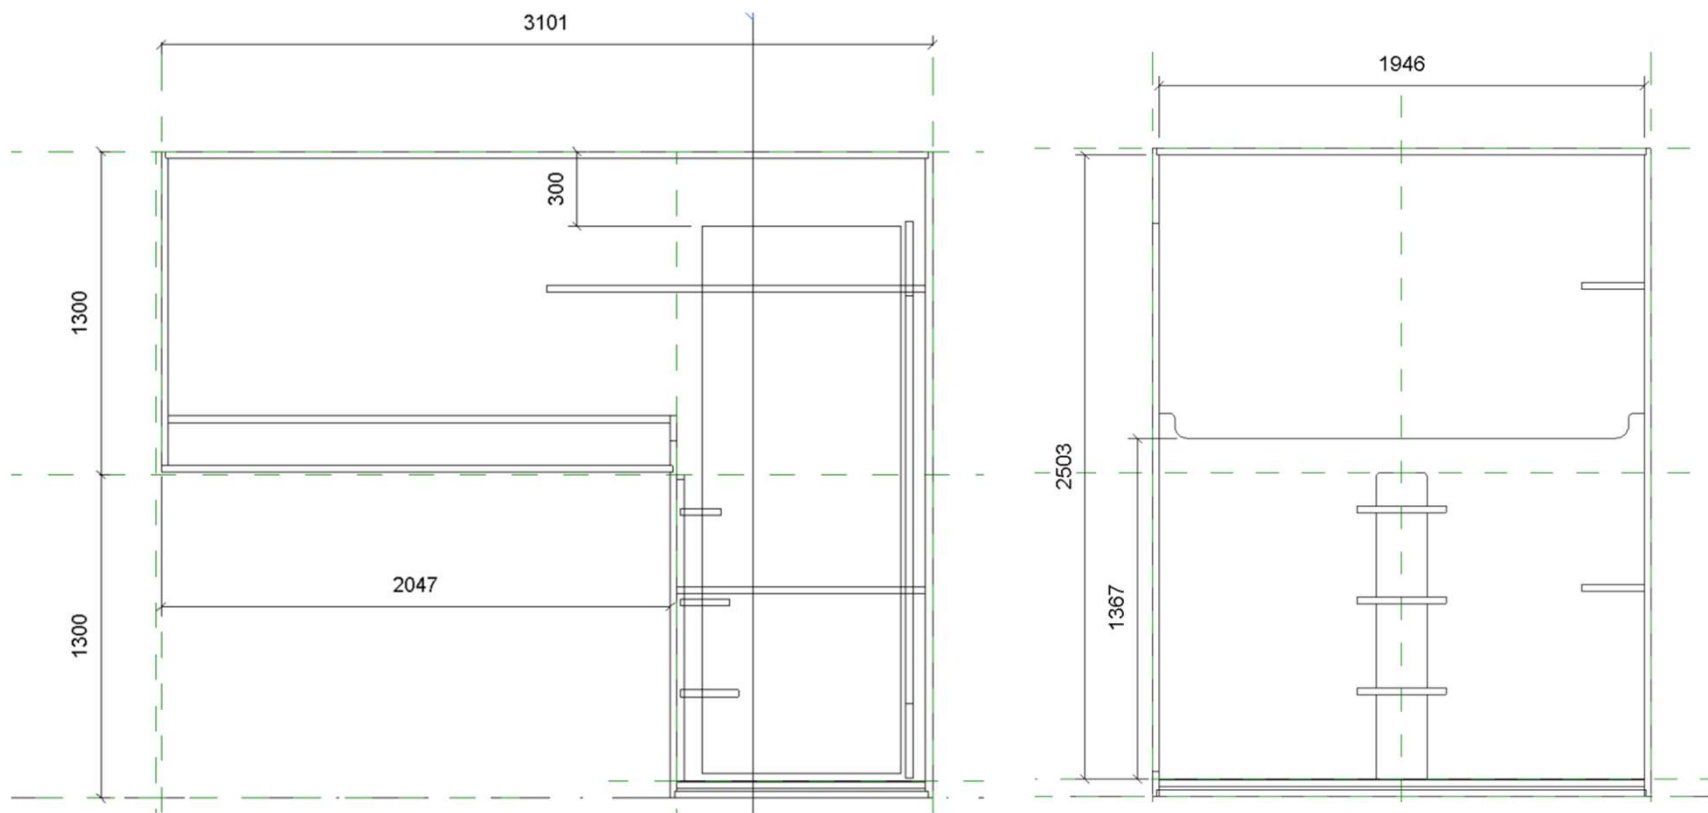

Wall-mounted shelves for storage

Wall mounted steps to climb the bed

LED light strip along the ceiling

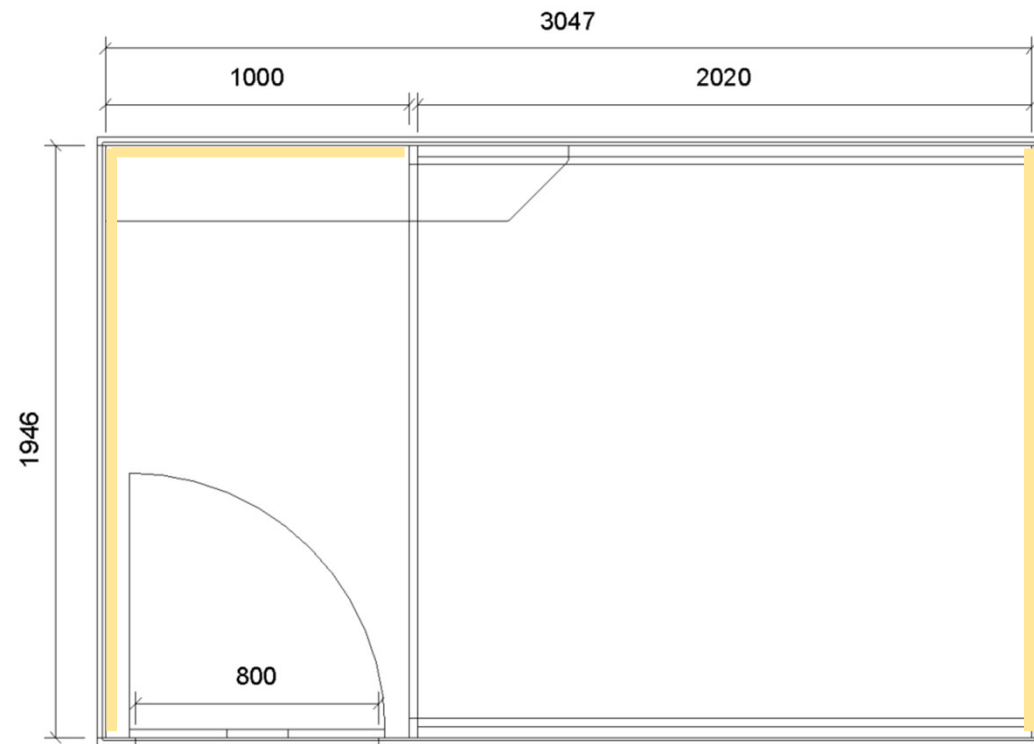

Elevations Top Module

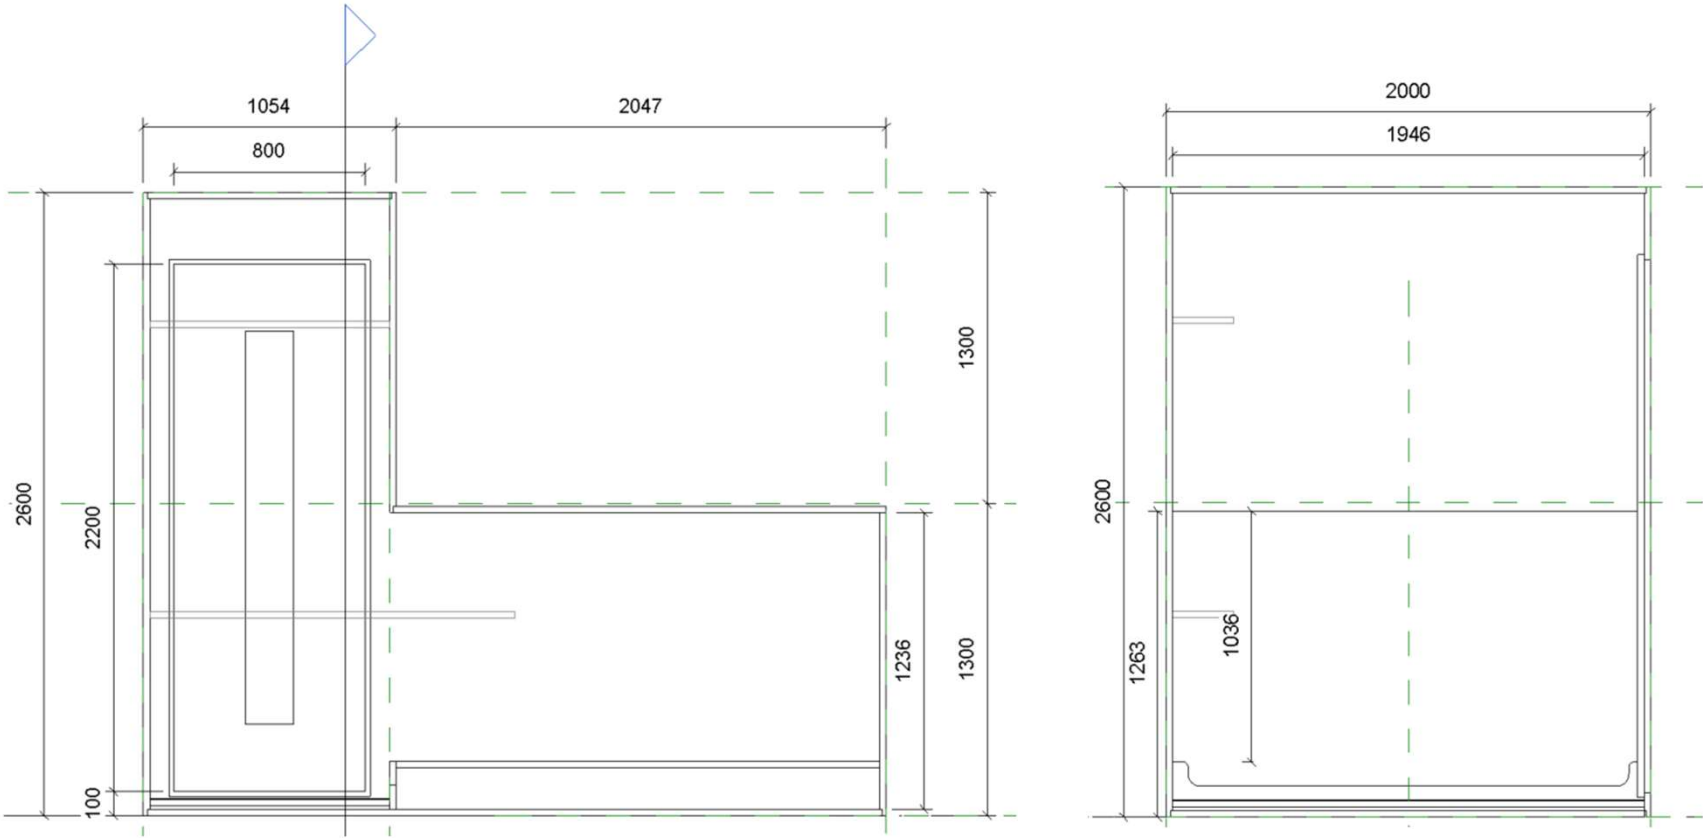

Plan view Bottom Module

The bottom module has space for a double bed mattress, 180x200 cm.
